Artifactory Package Summary — packages.idmod.org

Generated: 2026-07-14 · Source: https://packages.idmod.org

Instance structure

There are **32 repositories** spanning **7 package types**, organized as LOCAL (hosted) / REMOTE (proxy) / VIRTUAL (aggregate). Only the **LOCAL production** repos actually store IDM-owned artifacts.

- **LOCAL** — org-hosted artifacts (IDM's own packages land here)
- **REMOTE** — caching proxies of public registries (PyPI, npm, Docker Hub, CRAN, NuGet, RPM)
- **VIRTUAL** — a single URL aggregating a local + remote pair

Package type	Production LOCAL repo	Contents?	Latest activity
Python (PyPI)	`idm-pypi-production`	✅ **~107 package names**	2026-06-23
Docker	`docker-production-public` (51), `idm-docker-public` (16)	✅ **67 image repos**	2026-06-27
npm	`idm-npm-production`	✅ **4 packages**	2026-06-16
Generic (data)	`idm-data`	✅ **data files, not packages**	2026-07-12
NuGet	`idm-nuget-production`	⬜ empty	—
CRAN (R)	`idm-cran-production`	⬜ empty	—
YUM/RPM	`idm-rpm-production`	⬜ empty	—

> NuGet, CRAN, and RPM production repos are provisioned but currently hold **no packages** — only their remote proxies (`nuget-remote` , `cran-remote` , `rpm-remote`) are in use. Also present: 2 `testteam-*` dev/stage repos (Docker + PyPI) and Docker staging (`docker-staging-public`).

Python — idm-pypi-production (~107 packages)

The largest and most active repository. Flagship packages with latest version / release date / publisher:

Package	Latest version	Release date	Published by (owner)
`emodpy`	2.1.16	2025-12-04	pypi-prod-deploy (CI)
`emodpy-hiv`	3.0.1	2026-03-03	pypi-prod-deploy (CI)
`emodpy-malaria`	4.3.2	2026-01-22	idm_bamboo_user (CI)
`emod-api`	1.33.7	2026-01-22	artifact_staging_deploy (CI)
`emod-hiv`	1.0.5	2025-10-22	stitova
`emod-malaria`	0.0.78	2025-10-21	stitova
`idmtools`	2.2.2	2026-04-22	idm_bamboo_user (CI)

Package	Latest version	Release date	Published by (owner)
`idmtools-platform-comps`	2.2.2	2026-04-22	idm_bamboo_user (CI)
`laser-core`	0.7.0	2025-11-11	jbloedow
`pyCOMPS`	2.11.0	2024-06-20	jsteinkraus
`idm-buildtools`	1.0.5	2024-02-28	idm_bamboo_user (CI)
`dtk-tools`	1.2.0rc6	2021-03-18	zdu (legacy)

Package families in this repo:

- **EMOD / emodpy** disease models — `emod-{api,common,hiv,malaria,measles,polio,tbhiv,typhoid}` , `emodpy-*`
- **idmtools** platform suite — `idmtools-platform-{comps,container,slurm,local,general}` , `idmtools-cli` , `idmtools-models`
- **LASER** agent-based framework — `laser-core` , `laser_polio` , `laser-*-model` , `idmlaser*`
- **Utilities** — `pyCOMPS` , `idm-test` , `idm-buildtools` , `emod-api`
- **Vendored scientific deps** — `GDAL` , `Fiona` , `Shapely` , `geopandas` , `pyproj` , `statsmodels` , `lz4` , `scikit-cuda`

> Note: many names appear twice (e.g. `idmtools_cli` vs `idmtools-cli`) due to PEP 503 name normalization.

Docker — 67 image repositories

- **`docker-production-public`** (51 images): build/test environments and model runtimes — `emodpy` , `idmtools` (SSMT workers), `dtk-alma-*` , `dtk-rocky-*` , `idm-rocky-py39*` , `r-apache-base` , `laser*` , plus many user-scoped dev images (e.g. `krosenfeld_*` , `jonathanhhb-*` , `cwiswell-*`).
- **`idm-docker-public`** (16 images): `dtk` , `dtk-tools` , `emod` , `emodpy` , `idmtools` , `idmtools-slurm` , and org-partner images (`northwestern` , `nyu`).
- Latest tags observed: `idmtools/comps_ssmt_worker:2.1.0.11` (2025-03-31), `idm/dtk-rocky-testenv` (2023-10-26).

(Owner/tag detail is limited here because the Docker v2 `_catalog` API requires auth; the above is reconstructed from the storage-listing API.)

npm — idm-npm-production (4 packages, full coverage)

Package	Latest version	Last modified	Notes
`comps-ui-auth`	2.1.1	2022-09-30	COMPS UI auth lib
`microcomps`	0.1.0-build.42	2022-11-09	
`postette`	0.4.1	2021-02-09	
`comps-ui`	0.2.0	2019-01-22	oldest

These are UI components for the COMPS platform; all are relatively dormant (last activity 2022).

Generic — idm-data

Not software packages but **data assets** — **568 data files across 11 project folders**. This is the **most recently active** repo (2026-07-12); model input/data files are updated more frequently than released packages. Content is dominated by

EMOD/DTK simulation inputs.

Data types by file format

Extension	Count	What it is
`.json`	345	DTK/EMOD **demographics & config** files (population, node properties, simulation setup)
`.bin`	173	EMOD **binary climate/spatial inputs** (air & land temperature, rainfall, humidity rasters) — each paired with a `.bin.json` header
`.txt`	11	Notes / manifests / plain-text inputs
`.gz`	9	Gzip-compressed datasets
`.tgz`	7	Tarball data bundles (HIV, Malaria project packs)
`.pkl`	6	Python **pickle** objects (MEASLES — serialized model state/data)
`.zip`	5	Zipped archives (LASER data, GADM shapefiles)
`.csv`	5	Tabular data (LASER, tb)
`.npy`	3	**NumPy** array binaries (LASER matrices)
`.tar`	1	Tar archive (oc-proj)
`.exe`	1	Executable (LASER)
`.conf`	1	Config file (general)
(no ext)	1	Uncategorized

Organized by project folder

Folder	Files	Data types / character
`DtkInput`	524	Bulk of the repo — EMOD/DTK **simulation inputs**: `.json` (demographics/config) + `.bin` (climate rasters) + `.txt`
`LASER`	14	Mixed LASER model assets: `.gz` , `.npy` , `.bin` , `.zip` , `.txt` , `.exe`
`laser`	10	LASER datasets: `.gz` , `.csv` , `.npy`
`MEASLES`	7	`.pkl` (pickled Python data) + `.gz`
`gadm`	3	`.zip` — **GADM administrative-boundary** shapefiles (geographic)
`Malaria`	3	`.tgz` data bundles
`HIV`	2	`.tgz` data bundles
`oc-proj`	2	`.json` + `.tar`
`tb`	1	`.csv`
`malaria`	1	`.tgz`
`general`	1	`.conf`

> The dominant `.json` + `.bin` pairing is the EMOD signature: climate inputs ship as a raw binary raster (`.bin`) plus a JSON sidecar describing dimensions, node IDs, and date ranges. Note both `LASER` / `laser` and `Malaria` / `malaria`

> exist as separate folders — data uploaded by different teams/scripts over time.

Bottom line

IDM's Artifactory is predominantly a **Python + Docker** shop:

- **PyPI** (~107 packages) centered on the EMOD/emodpy, idmtools, and LASER ecosystems
- **Docker** (67 images) for build environments and model runtimes
- **npm** holds 4 legacy COMPS UI libraries
- `idm-data` holds project datasets (most recently active)
- **NuGet / CRAN / RPM** production repos are empty placeholders

Most current releases are pushed by CI service accounts (`idm_bamboo_user` , `pypi-prod-deploy` , `artifact_staging_deploy`), with some manual publishes by individual engineers.

Methodology / data sources

Data was collected from the public Artifactory REST API:

- Repository inventory: `GET /artifactory/api/repositories`
- PyPI package list: `GET /artifactory/api/pypi/idm-pypi-production/simple/`
- Folder/artifact listings: `GET /artifactory/api/storage/{repo}/`
- Latest activity + owner: `GET /artifactory/api/storage/{repo}/{path}?lastModified` (`createdBy` field)
- npm metadata: `GET /artifactory/api/npm/idm-npm-production/{package}`

Note: AQL (`/api/search/aql`) and the Docker v2 registry catalog (`/v2/_catalog`) require authentication and were not used.
